## BMP Palette Color Changer

### \$ 1. Introduction

This application software can change the color of a bitmap image with 2/16/256 colors by changing the palette color(s).

### \$ 2. Palette color change

When a bitmap file is opened, the following "Palette color change" window is automatically displayed.

### \$ 3. Functions

Opens a bitmap file. Note: Only a bitmap with 2/16/256 colors can be processed.

Zooms out the bitmap image displayed.

Zooms in the bitmap image displayed.

Pops up the "Palette Color Change" window, if the window cannot be found on the screen because of being covered up by other window(s).

Copies the bitmap image to the Clipboard.

Saves the bitmap image with a filename.

Shows the version information.

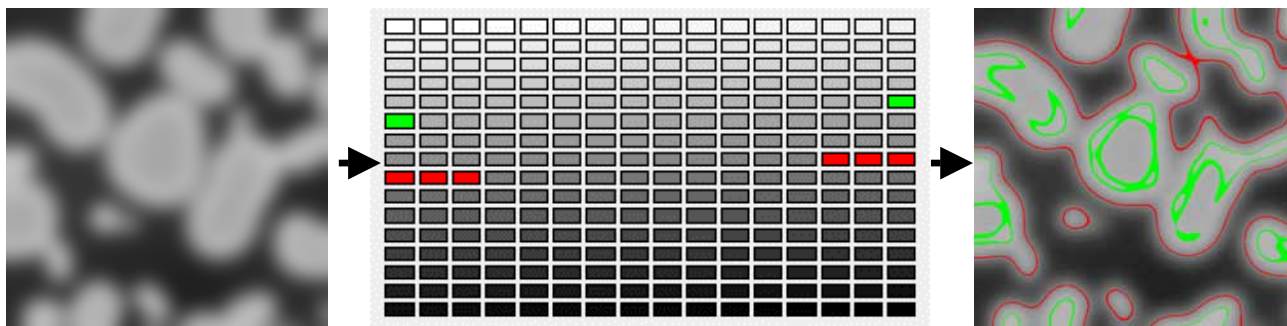

(This file.)

Closes this application software.

#### \$ 4. An example

When getting the rough outlines of particles (that are out of focus) in a grayscale image, the "BMP Palette Color Changer" might be useful.  
In this example, red lines in the image show the rough outlines of particles.
