

**Please refer to the following document:**

=====

**How to read an old “.hlp file (\*)” on English Windows 10 (x64/x86):**

(\*): The “.hlp file” must be read, without any problem, on Windows XP, 2000, ME, or, 98/98SE.

=====

Even if the “Language of your Windows 10” is different from Japanese or English, for example “French Windows 10,” you can review an old “.hlp file” on your Windows 10, if you can get the proper “winhlp32.exe,” for example “French winhlp32.exe” of the French Windows XP (x64/x86).

In other words, when applying the “Win10-Hlp32-Fix.cmd” in the “Command Prompt” window of your Windows 10 (x64/x86), by “Run as administrator,” together with the proper “winhlp32.exe” (that properly corresponds to your Windows 10), you can easily get the situation that can properly display an old “.hlp file” on your Windows 10 (x64/x86).
